Importance: High

Hi Harry,

Mark Sprenger provided the attached data file so that SRC may support Region 9 in developing presentation materials.

1. Can we have access to the full data set in Scribe?
2. We received the attached file from Mark Sprenger which contains sediment data thru 8/12 and surface water data thru 8/15. Do you anticipate data from after 8/15 coming in?
2. Is there a map that is already prepared and can be shared with us that shows the sampling locations? If not and you need one, SRC can develop maps.
3. Should all locations included on the R9 tab of the attached be shown on the graphs? Would you like any or all of the Region 8 and/or Region 6 locations shown on the graphs?

4. The graphs that we will be preparing will include only those data that have been validated. Are you looking to show only the most recent day that we have validated data for in this presentation? If you only want to show a single day on the slide, we may be excluding locations that we do not have validated data for (unless validated data are available for all locations on that date). Another approach would be to show the data from the most recent date that we have for each location (we can include the date in the location label if more than 1 day is being presented on a graph).

Feel free to contact me or Amber Bacom (303-868-2743) with any questions, comments, or concerns. I am available through 6PM Eastern time. Amber will be available all day.

Mark

Let me know when it is OK for SRC to follow-up with Harry Allen to verify that we have the complete data that he wants for his presentation.

Thank you,

Mark

Subject: Gold king response support

I have a request from Region 9 to provide support for some data work.

Harry L. Allen (Region 9) would like the eater and sediment data from their area put into graphs and support materials as was done for Region 8. Who should I send the materials to and talk to? This needs to get done today if possible.

Thanks

mark
